

ATTENTION FOR PITTSBURGH OR TIPTOP RACK SYSTEMS!!!!

Caution: some US manufacturers of eurorack bus supply systems use coded plastic tub connectors, but they are in opposite direction to ours.

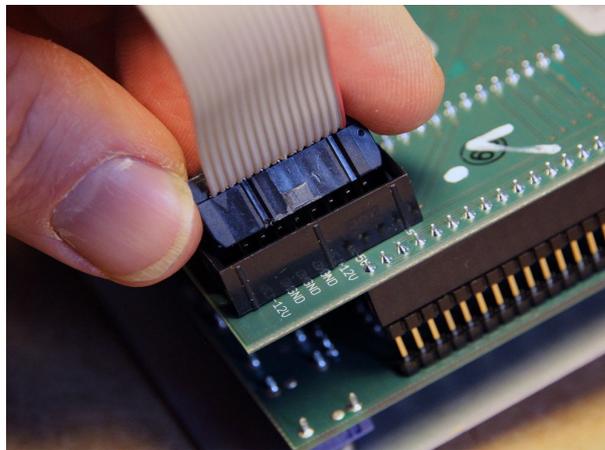

If you plug in the enclosed Jomox cable and connect these to the Mod.Base09 / Mod.Brane11, the module will not work!!!

Also the -12 Volts of the rack supply will get shorted, and the rest of the rack will not function either! Do NOT operate the module this way as more damage to your hardware may occur!!!

Solution: please remove the nose of the ribbon cable connector with a knife as shown in the picture:

Then flip the cable and insert it into the module's connector the other way around.

Now connect the module with the reversed cable to the system bus and it will work. No worry, the Jomox module has protection diodes so it will not get damaged. Sorry for your inconveniencies!
