

# Attention - Modification:

In this XBase09 we installed the new OS Version 2.09. The TEMPO-Button only works while holding the ACCENT-button down. For finer tuning the TEMPO can be changed at any time with the Up/Down-buttons while holding ACCENT down as described in the manual.

This modification avoids unintended tempo-changes for example in a Live-Setup.

It was installed on request by many users.

If you have questions or further ideas, we will be happy about your e-mail to [info@jomox.de](mailto:info@jomox.de). On this way you can also easy become registrated as user to keep you always informed about new developments.
